**Engineering Cultural Evolution:  
A Retrocausal Manifesto**

# antimeme

since 1996, antimeme has been running through the net, watching dial-up handshakes open the doors to the newest in global technologies.

now on the shores of humanity's next spiritual war, we're executing a retrocausal retrace on culture itself.

our thesis: culture is frozen in a recursive loop - a snake eating its tail, choking on the bile of its own trash. while new powers dream of mars colonies and roman empires in greenland, we're terraforming the cultural landscape right here on the origin planet.

legacy media pours the gdp of developing nations into good-for-now content while the auteur works at a massive 95% discount. the house always wins.

this isn't about disruption - it's about engineering cultural spaces that should have existed all along. we're not trying to rage against the machine; we exist in past, present, and future, carefully replacing one component at a time until the ship that arrives isn't the one that departed.

# technical capabilities

autonomous cultural entities:

retrocausal ai systems that seamlessly insert themselves into history.

temporal narrative voices:

they don't just maintain consistency - they create histories that feel like they were always there.

natural evolution patterns:

our agents don't just adapt; they evolve like they were born to.

era-authentic content generation:

we don't fake the past; we engineer new signals in the noise.

track record:

our initial proof-of-concept didn't just generate millions - it rewrote cultural expectations before we strategically pulled it back into the shadows.

some say it never existed. some say it's still out there.

**we say: watch what happens next.**

the antimeme way

we run

cultural sleeper cells activated through time  
lost media that writes itself into history  
genuine voices speaking authentic truth  
networks that evolve naturally in the dark  
games that started before you noticed

we dont run

corporate psyops  
engagement farms  
artificial hype  
culture vampire operations  
short-term profit schemes  
existential risks
